EDUCATION

Cavite State University - Carmona Campus

Bachelor of Science in Computer Science

City of Carmona, Philippines

Graduation, September 2025

- **Concentrations:** Training LMs (language models) and ML
- **Related Coursework:** Artificial Intelligence, Machine Learning, Data Structures and Algorithms, Software Engineering, Blockchain Technology

PROJECTS

Hyperledger Blockchain System – Alumni Document Verification

Full-Stack Developer

- Designed and implemented a permissioned Hyperledger Fabric network and chaincode to store tamper-proof alumni records.
 - Built RESTful APIs for credential issuance & verification and integrated smart contracts with backend services.
 - Implemented admin tooling and deployment scripts to provision the network and nodes.
- Tech: Hyperledger Fabric, Go/Chaincode, FastAPI/Node, Docker, MongoDB

AI-powered Document Intelligence Platform – CloudComm

Full-Stack Developer

- Built an end-to-end AI system for documenting OCR, NLP, and classification using FastAPI, PyMuPDF, pytesseract, and Transformers.
 - Implemented file caching, SQLAlchemy pipelines, and containerized services with Docker for reproducible deployment.
 - Developed React + TypeScript frontend using Context API for state management.
- Tech: FastAPI, PyTorch, PyMuPDF, SQLAlchemy, Docker, React/TypeScript

Consultation-System-for-Teachers-PyShop

Full-Stack Developer

- Implemented a lightweight Django ecommerce platform with product catalog, shopping cart, checkout, and order management.
 - Extended Django Admin with modular management tools so non-technical staff can manage inventory and orders.
- Tech: Django, SQLite, Bootstrap, Django Admin

LizardScale

Full-Stack Developer

- Built a 2D platformer prototype in Unity featuring polished player movement, collision detection, and basic animations.
 - Implemented enemy AI (ranged flying enemy) using a state machine and laid groundwork for platform pathing and level logic.
- Tech: Unity 2022.3 LTS, C#

Game Jam Bullet Hell

Full-Stack Developer

- Created a fast-paced 2D bullet-hell prototype built with Unity.
- Move to dodge enemy bullets and hold fire to shoot.
- Includes basic enemy spawners, power-ups, and a main menu.

SmartDoc Analyzer

Full-Stack Developer

- Built an AI document analysis tool to extract text from PDFs/images, perform entity extraction, and return insights via API.
 - Implemented preprocessing, model inference, and result caching to improve throughput and avoid duplicate work.
- Tech: Python, PyMuPDF, pytesseract, PyTorch, FastAPI, MongoDB

Dota Tournament Bracket Maker Using Flask

Full-Stack Developer

- Implemented bracket generation, match scheduling, and seeding logic with role-based access control for organizers and players.
- Exposed RESTful endpoints for tournament management and built a simple UI for bracket visualization.

Tech: Flask, SQLAlchemy, SQLite/Postgres, JavaScript

ACTIVITIES AND LEADERSHIP

- Member of Junior Chamber International Philippines Organization **Present**
City of Carmona, Philippines
- Volunteer for Project I.V.A.N. – Investing in Vulnerable Angels’ Needs **March 2025**
Binan, Laguna, Philippines
- Treasurer at Young Programmer and Developer Society **2022 – 2023**
Cavite State University - Carmona Campus

SKILLS

Programming: Python, JavaScript/TypeScript, Java, C#, C++, HTML/CSS, SQL, Node.js, React, Vite FastAPI.

Technical/Programmatic: Hyperledger, Smart Contracts, API Development, Docker, Git, MongoDB, SQLAlchemy, Alembic, Uvicorn, P2P Concepts, Machine Learning, Data Structures & Algorithms

Platform: Linux, Windows

Languages: Filipino, English
